Sensitivity list

Delvotest® T

Last revision 2026 02 20

The table presented in this document is an indicative list of the sensitivity of the Delvotest® T at control time for the most used antibiotics in the world. This list is not exhaustive. The test is sensitive to many more antibiotic drugs and sulfonamides. Values presented in this list are ppb (parts per billion) equalling µg/Kg or ng/gram.

The best sensitivity is reached when using Control Time (CT). To test at control time, additionally to the milk you would like to test, perform one additional test with negative control milk, when the test containing the negative control milk turns yellow read the test result of the other milk.

* not listed, legislation regulation normally restricts the use: not to be used for lactating animals.

** CCB detection capability is the lowest concentration where a substance can be detected with 95% probability.

*** for cattle 20ppb, for sheep milk 200ppb

Delvotest® T sensitivity listed as CCB as determined (according to European legislation) by AFNOR NF102 validation study 2023. [N°16 2023-12 Summary-report DSM DelvotestT.pdf](#)
